

# Incubyte Manual Assessment – Gmail Compose Function

## Objective

Validate the Gmail **Compose** functionality by sending an email with:

- Subject: **Incubyte**
- Body: **QA test for Incubyte**

This document includes the assignment overview, traditional/manual test cases, BDD-style test cases, and a summary of positive and negative scenarios.

## Deliverables

1. Traditional style test cases.
2. BDD-style test cases.
3. Positive and negative scenarios.
4. Excel workbook containing all detailed test cases.
5. GitHub repository for submission.

## Test Scope

- Verify Gmail Compose window launch.
- Verify recipient, subject and body input.
- Verify successful email sending.
- Validate Sent folder update.
- Validate error handling and boundary conditions.

## Traditional Test Cases Summary

| TC ID  | Scenario                                       | Type     |
|--------|------------------------------------------------|----------|
| TC_001 | Compose and send email with valid subject/body | Positive |
| TC_002 | Verify subject text accepted                   | Positive |
| TC_003 | Verify body text accepted                      | Positive |
| TC_004 | Send email to multiple recipients              | Positive |
| TC_005 | Send email with empty subject                  | Negative |
| TC_006 | Send email with empty body                     | Negative |
| TC_007 | Invalid recipient email                        | Negative |
| TC_008 | No recipient entered                           | Negative |
| TC_009 | Subject exceeds normal length                  | Negative |
| TC_010 | Internet disconnected during send              | Negative |

## BDD-Style Test Cases

### Scenario 1: Successfully send an email

Given the user is logged into Gmail. And  
the Compose window is open.  
When the user enters a valid recipient email address. And  
enters the subject as "Incubyte".  
And enters the email body as "QA test for Incubyte". And  
clicks the Send button.  
Then the email should be sent successfully. And the  
email should appear in the Sent folder.

### Scenario 2: Send an email without entering a recipient

Given the user is logged into Gmail. And  
the Compose window is open.  
When the user leaves the recipient field empty. And  
clicks the Send button.  
Then Gmail should display a validation error message. And  
the email should not be sent.

### Scenario 3: Send an email with an invalid recipient address

Given the user is logged into Gmail. And  
the Compose window is open.  
When the user enters an invalid email address such as "abc@invalid". And  
clicks the Send button.  
Then Gmail should display an invalid email warning message. And the  
email should not be sent.

### Scenario 4: Save the email as a draft

Given the user is logged into Gmail. And  
the Compose window is open.  
And the user has entered the subject and body.  
When the user closes the Compose window without sending. Then the  
email should be automatically saved in the Drafts folder. And the draft  
should be available when reopened.

### Scenario 5: Send an email with an empty subject

Given the user is logged into Gmail. And  
the Compose window is open.  
When the user enters a valid recipient and leaves the subject empty. And clicks  
the Send button.

Then Gmail should display a warning or allow sending according to its behavior.

## Scenario 6: Internet disconnected during send

Given the user is logged into Gmail and the Compose window is open. When the internet connection is lost and the user clicks Send.

Then Gmail should display an appropriate network error or retry message. And the email should remain available as a draft.

## Submission Notes

The detailed traditional test cases and BDD scenarios are maintained in the accompanying Excel workbook **Incubyte\_Gmail\_Compose\_Test\_Cases**. This PDF provides a concise overview and summary of the assignment deliverables required by Incubyte.

## Summary

- Total Traditional Test Cases: 10
- Positive Test Cases: 4
- Negative Test Cases: 6
- BDD Scenarios: 6
- Deliverables Included: PDF Documentation + Excel Test Cases + GitHub Repository Submission
